A companion to the HelloLilly Jobseeker Product Vision, Version 4. Principles and boundaries are in Addendum A.

Opening

Omställning used to describe something that happened to a few people at a time: a factory closing, a branch office shutting, an injury that ended a career. In 2026 it describes a large part of the labour market. Work is changing faster than people's training, careers last longer than the jobs inside them, and many people will change direction more than once.

Sweden has built more support for this than almost any country. Since the 2022 reform of the employment protection rules, there is a transition study grant for people mid-career, transition organisations funded by collective agreements, a public transition organisation for those without one, labour-market training through Arbetsförmedlingen, free adult education, vocational colleges, and free study and careers guidance in every municipality.

And yet the support misses the people who need it most. The transition study grant has so far been used mostly by higher-educated people in secure occupations. In 2026, close to half of its budget is forecast to go unused, because too few eligible people apply. The money exists. The routes exist. What is missing is the connection between the person and the route, at the moment it matters, in language they understand, with someone beside them.

That connection is exactly what HelloLilly is built to be.

SECTION 01

Who Is Changing, and Why

01

There is no typical career changer. The reason for the change shapes everything that follows: the emotional starting point, the financial runway, the right route and the honest expectation.

DRIVER	WHO IT TYPICALLY HITS	WHAT THEY USUALLY NEED FIRST
Structural change and automation	Mid-career administrative, factory, warehouse and transport workers; often older, often outside the big cities	A realistic adjacent direction, quickly; an income bridge; early outreach
AI and digital change	Back-office, data entry, support and administrative roles	Short, practical upskilling into adjacent digital work, or a move into people-facing work
Redundancy and closure	Whole workforces at once, in declining industries	Rapid placement where possible, re-training where not; the transition organisation's support
Health, injury and ageing	Physical trades, care and transport workers	The formal routes back to work, matching by physical demand, and psychological support
Foreign qualifications	Skilled newcomers: nurses, engineers, teachers, pharmacists	Recognition of what they already know, plain-Swedish guidance, a bridge role while it happens
A chosen change	Anyone mid-career, often between the mid-thirties and mid-forties	Testing the direction before investing; honest numbers
The market has simply moved on	Long-term jobseekers applying to the same kind of role for a year	A diagnosis: the role, not the application, is the problem

The evidence adds two things to this picture. Whether a change is chosen or forced shapes how it feels for years afterwards, and money is the most consistent predictor of how a transition ends. So the first question is always **why**, and the second is always **what can you carry**.

SECTION 02

The Swedish System, Simply

02

The system is rich, but it is spread across many actors, each with its own rules, language and timing. This is the map HelloLilly holds so the person does not have to.

ACTOR	WHAT IT OFFERS	WHO IT IS FOR
The transition organisations (such as TRR, TSL and Omställningsfonden, depending on sector and collective agreement)	Advice, coaching, help to find new work, support for study, and help applying for the transition study grant, including a supporting statement	Employees covered by a collective agreement, often while still employed or after redundancy
The public transition organisation (at Kammarkollegiet)	Guidance on transition and study support	Employees without a collective agreement, and some self-employed people
CSN	The transition study grant and loan; ordinary study funding	People studying, on the conditions of each grant
Arbetsförmedlingen	Registration, matching services through providers like HelloLilly, labour-market training, work placements and subsidised employment	Registered jobseekers
Försäkringskassan	Sickness benefit, the rehabilitation chain, and since March 2026 a way to test work at one's own employer while on full sickness benefit	People on sick leave
The municipality	Adult education (komvux), Swedish for immigrants, the recruitment grant for people with short education, and free, independent study and careers guidance	Residents
Vocational colleges, folk high schools and universities	The courses themselves, many of them tuition-free	Students who meet each programme's requirements
Validation bodies	Recognition of prior learning and of foreign qualifications	Anyone with skills learned outside formal education or abroad

Where it breaks. Each actor works well inside its own lines. The person, though, lives across all of them. Nobody joins them up for someone who does not know they exist, does not understand the official language, or does not have the energy to ask six organisations the same question.

SECTION 03

The Transition Study Grant, as It Stands in October 2026

03

The strongest single instrument in the system, and the one that most clearly shows both the promise and the gap. Figures from CSN, 2026, checked in October 2026; they are updated every year.

Who	From the year a person turns 27 to the year they turn 63. From the year they turn 62, at most 10 weeks. The loan part is available until the year they turn 60.
Work condition	Worked at least 8 of the last 14 years, and at least 12 of the last 24 months
Collective agreement	Not required
What it pays	80 per cent of previous income, at most 5,773 kronor a week before tax in 2026; a loan of up to 3,540 kronor a week can be added
How long	Up to 44 weeks full-time, or longer part-time (for example 88 weeks at half time)
The condition	The education must strengthen the person's position in the labour market
When to apply	From 1 October, for studies starting between January and June the following year. From 1 April, for studies starting between July and December. Applications sent too early are rejected.
The budget	Limited per application round, split one third for public-sector employees and two thirds for private-sector employees. When the money in a round runs out, remaining applications are rejected, so the date of application matters.

The paradox of 2026. Two facts sit side by side. The budget is first come, first served within each round, which rewards whoever applies fastest and most completely, usually the already advantaged. And yet, across the year, close to half the budget is forecast to go unused: about 3.2 of 7.3 billion kronor paid out, because too few eligible people apply. Both point to the same gap. The people who would gain most do not know the grant exists, do not believe it is for them, or are beaten by the form.

What that means for HelloLilly. The grant does not go to the most deserving. It goes to the most prepared. HelloLilly's job is to make the people the system currently misses the best prepared people in each round: aware, eligible-checked, direction-tested, with a complete application and a coach-reviewed motivation ready when the window opens.

When the grant is not the answer

Many long-term jobseekers do not meet the work condition, because a long gap breaks the twelve-months rule. That is a different door, not a dead end:

- **Labour-market training** through Arbetsförmedlingen: free, short, aimed at occupations with shortages, with activity support. The evidence favours exactly this shape.
- **The recruitment grant (studiestartsstöd)**, for people with short previous education and a long time out of work, reached through the municipality.

- **Ordinary study funding** from CSN, open more widely, without the queue.
- **Work testing on sick leave**, from March 2026, for people on full sickness benefit, at their own employer, for limited periods.
- **Free study and careers guidance** in every municipality, independent of any course provider.

SECTION 04

Where People Fall Through

04

THE GAP	WHAT IT LOOKS LIKE	WHAT HELLOLILLY DOES
Not knowing	The person has never heard of the grant, the transition organisation or validation	The Situation Guide explains, in plain Swedish, which routes exist for someone in their situation
Not believing it is for them	"That is for academics"	The Funding Navigator checks eligibility against the real conditions, and stories from people like them make it real
The language of the system	Official letters and websites in dense administrative Swedish	Letter Helper and Lilly explain in plain, simple Swedish
No direction	"Maybe retrain?" and a course catalogue	Transition Compass and Direction Explorer: realistic adjacent directions built on what the person knows
Studying what they already know	A year of study to prove existing skills	The Prior Learning Check before any course
The wrong course	A course chosen from a catalogue, not from demand	The Education Matcher ranks by demand and outcome, and offers short labour-market training first
The form and the window	An incomplete application, filed late in the round	The Funding Navigator prepares the pack in advance and reminds before the window opens
The money	Fear of the income gap	Transition Economics shows applying now, a short course and a full re-training side by side
Vanishing while studying	Out of the search, out of the network	One light job action a week, and the network kept warm
Alone with it	Too many actors, nobody holding the whole picture	The coach, the Case Record and one connected system

SECTION 05

HelloLilly's Role in the System

05

HelloLilly does not replace any actor in the Swedish system. It connects them around one person.

- **It is the front door.** One place where a jobseeker learns what exists for them, in plain Swedish, instead of six websites and six logins.
- **It is the preparer.** Agents gather the facts, check eligibility, draft the motivation, find the courses and assemble the application, so the person arrives at each actor ready.
- **It is the connector.** It points to the transition organisation, the municipality's free guidance, Arbetsförmedlingen's training and Försäkringskassan's routes by name, at the moment they are relevant, and never pretends to be them.
- **It keeps the fork open.** Applying now, a placement and re-training are always shown side by side.
- **It keeps the human in the loop.** The coach signs off any long education and carries the motivation the evidence says no tool can.
- **It learns.** Which routes work for which people, recorded as dated facts, never as proof of cause.

For HelloLilly as an organisation, this matters directly. Its goal is to match 10,000 people to the right job **or education** by 2030, on results-based funding. Education is half the promise, and the transition system is where much of that half is won or lost.

SECTION 06

The Tool: From Plan to Product

06

Omställning in HelloLilly is not a separate product and not a page of information. It is one guided flow, the **Omställning Guide (Omställningsguiden)**, built around one engine that already has a plan: the education-finding engine at the heart of the **Education Matcher**. The guide is the journey; the engine is what makes each step concrete.

The guided flow

STEP	TOOL	WHAT THE PERSON GETS	ENGINE UNDERNEATH
1. Why are you here?	Transition Compass	The driver, the financial runway, digital comfort, confidence; the routes back from sick leave	Plain-Swedish conversation, spoken if preferred
2. Where could you go?	Direction Explorer	Three or four realistic adjacent directions, each with demand, adverts and salary	The national map of occupations and skills, matched to the fact bank
3. What do you already have?	Prior Learning Check	What could be recognised, including foreign qualifications	Taxonomy-backed guidance; the coach for the contact
4. What closes the gap?	Education Matcher	The few courses that close it, free ones and short ones first, with placements	**The course-fit engine** (below)
5. Can you afford it?	Funding Navigator and Transition Economics	Eligibility, dated facts, the application pack, months and money side by side	Funding rules file, checked yearly
6. Try it first	Test Before You Invest	An informational talk, a shadow day, a taster, a work trial	Contact Planner, Placement Finder, coach network
7. Decide	Transition View	The coach's sign-off on anything long	The coach
8. Make it the plan	My Plan	Direction, course, funding and placement written into the person's plan, with one light job action a week while studying	Progress Support

A person can enter at any step. Someone who already knows their direction goes straight to step 4; someone with a gap from a real advert arrives at step 4 from Match Analysis; someone with no target starts at step 1.

The course-fit engine

The engine was planned in June 2026, and its data sources were verified as open and live at the same time. It does one thing well: given a gap or a direction, it finds the real courses that close it, and ranks them honestly.

STAGE	WHAT IT DOES	SOURCE
Read the gap	Takes the gaps from Match Analysis or Plan Analysis, or the chosen direction	The person's case
Translate to skills	Maps each gap onto the national taxonomy of occupations and skills	JobTech Taxonomy
Find courses	Searches every publicly funded course in Sweden: komvux, vocational college, folk high school, university, labour-market training	Susa-navet (Skolverket), daily
Link course to occupation	Checks which occupations and skills each course actually leads to	JobEd Connect
Weigh demand	Adds the shortage level and outlook for the occupation, and live advert volume	Yrkesbarometern, SCB, JobTech
Weigh outcomes	Adds what happened to earlier graduates, year-tagged	SCB and the vocational college authority
Rank	Gap closed × demand × outcome, with short, free and placement-including courses lifted	Code, not a model
Write the learning plan	A short list per gap: course, provider, place, start, length, cost, outcome note, recognition shortcut, and "apply now anyway" beside it	Into My Plan and the Case Record

The engine never invents a course, a recognition or an outcome. Where a data source has no answer, the learning plan says so.

How it is built

STEP	DELIVERS	WHY FIRST
1. The course-fit engine and learning plan	Courses that close real gaps, with the fork always shown	Every other step uses it; it is useful on day one from Match Analysis
2. Transition Compass	The why, the runway and the routes back from sick leave	Shapes everything after it
3. Funding Navigator	Eligibility and the application pack, ready before the window	The equity promise; the October and April windows
4. Direction Explorer and Prior Learning Check	Directions and recognition	Needs the taxonomy layer already built in step 1
5. Transition Economics and Test Before You Invest	Months and money; trying before investing	Builds on the earlier steps

The Omställning Guide is therefore not a new idea waiting for a plan. It is the Education Matcher's engine, wrapped in a guided journey that starts with why, ends with a plan, and keeps the coach and the fork in it all the way.

SECTION 07

How Omställning Connects to the Rest of the Site

07

CONNECTED PART	THE CONNECTION
Situation Guide and Letter Helper	The rules, rights and actors of the transition system, explained for the person's own situation
My Plan and Plan Analysis	Spots when the plan and the market have drifted apart, and opens the transition route
Match Analysis	A gap that cannot honestly be met yet becomes a route, not a dead end
Job Applications and Job Radar	A direction track adds the new occupation to the morning search
Placement Finder and Employer Bridge	Placements, work trials and supported first jobs in the new direction
Contact Planner and LinkedIn	Informational conversations with people in the new field, as ready-to-send messages; a LinkedIn profile that tells the story of the change
CV Builder	New skills and education shown truthfully the moment they are confirmed
Interview Preparation	A war-room for a course interview, a placement or a career-change interview, with the bridge from the past into the new field
Community and Expertise Exchange	People who made the same move, and their honest timelines
Coach Network and the Coach Vault	The coach who knows the target field, and a door into an employer there
Progress Support	One light job action a week while studying
Outcome Engine	What has actually worked, for whom, as dated facts

SECTION 08

Honest Principles for Omställning

08

- **Never sell escape.** The promise is a better-matched, more durable transition, not a guaranteed way out of a changing labour market.
- **Ask why first.** The reason for the change decides the route and the expectation.
- **Show the fork every time.** Applying now and a placement are always beside re-training.
- **Short and demand-aligned first.** Courses are recommended from demand, not from the catalogue.
- **Recognise before re-training.**
- **Dated facts only.** Every amount, age and date is shown with its year and source, and checked again every year.
- **Make the underserved the best prepared.**
- **Plain Swedish and no digital gate.** Spoken mode and the coach beside the person on every flow.
- **The coach signs off the big decisions.**

Appendix: Sources and Dates

Facts in Section 3 were checked against CSN's pages on the transition study grant (updated 29 September 2026) in October 2026. The forecast of unused funds comes from a parliamentary interpellation (2025/26:379) citing CSN. The work-testing instrument on sick leave follows Proposition 2025/26:53. Evidence on who uses the grant comes from SNS Analys 104 (2024) and IFAU; evidence on drivers, wellbeing and money from the consolidated evidence brief summarised in **What the Evidence Says**.

All figures change. HelloLilly serves them year-tagged, re-checks them every year, and refuses figures the sources have retired.
