

STANDALONE INSERT FOR THE JOBSEEKER PRODUCT VISION

Re-Skilling & Course Guide

Kompetenslyft

When the honest answer is that a gap stays a gap, show the person the path to close it - without pushing them onto a course they may not need.

5 PASTE-READY FRAGMENTS

WITH A PLACEMENT MAP

OPPORTUNITY TOOL (SECTION 8, CATEGORY B)

Five fragments, one destination each

Each block below is written to drop straight into the master Jobseeker Product Vision. Paste each into the section named on its label. The placement map on the last page is the full index.

00

WHY THIS INSERT EXISTS

For some people the blocker is not how they present who they are, but a **genuine skills gap that has to be closed before the right work is within reach.**

Education is therefore not a footnote to the job search, but a first-class route back to work - sitting beside applying directly, rather than underneath it.

#	FRAGMENT	GOES INTO
1	Tool entry	Section 8, category B (Opportunity tools), after Match Analysis
2	Promoting paragraph	Executive Summary, or the Section 8 intro (one location, not both)
3	Build-order line	Section 9, under Phase two: Matching
4	Honest sourcing note	Section 7, How We Build It Responsibly
5	Placement instructions	The map itself - not pasted, just followed

The tool entry

The full Section 8 entry for the tool. It reads as the honest next move once a gap is named, so it belongs beside the matching tools.

01

PASTE-READY

→ SECTION 8, CATEGORY B. OPPORTUNITY TOOLS - DIRECTLY AFTER MATCH ANALYSIS (MATCHANALYS)

Re-Skilling & Course Guide (*Kompetenslyft*)

Why: When the honest answer is that a gap stays a gap, show the person the path to close it, without pushing them onto a course they may not need.

- **Triggered by the honest outcome.** Application Check and Match Analysis already name the requirements a person cannot yet meet. When a gap cannot be covered by reframing existing experience, this is where that dead end becomes an action path.
- **Recommends the few courses that actually close the decisive gap** for the target role, driven by what the labour market is asking for, not by browsing a full catalogue.
- **Always shows the fork.** Apply now anyway, faster but a lower fit, set beside retrain, slower but a higher fit. The person sees the trade-off and decides. Retraining is one option, never the default.
- **Checks first whether prior learning can be recognised.** Sometimes the skill is already there and only needs to be validated, which can shorten or remove the course entirely.
- **Honest about outcomes and timing.** Shows the real employment figures for a pathway where they exist, and is plain that training pays off slowly, often over years rather than months, so no one retrain on a false promise.
- **Works whatever the person's comfort with technology.** A light, spoken mode guides the next step out loud, and a coach can pick up the same thread, so the education route is not gated by digital confidence.
- **Augments the coach, does not replace them.** The recommendation and its reasons feed the coach conversation, where the human judgement about whether retraining is right for this life actually happens.

The framing, and where it lands

A promoting paragraph that makes education a first-class route, and the single build-order line that schedules it as a fast-follow.

02

PASTE-READY

→ EXECUTIVE SUMMARY (OR THE SECTION 8 INTRO) - USE ONE LOCATION, NOT BOTH

For some people the blocker is not how they present who they are, but a genuine skills gap that has to be closed before the right work is within reach. Education is therefore not a footnote to the job search, but a first-class route back to work, sitting beside applying directly rather than underneath it. It is what makes the 2030 goal read the way it is written, matching people to the right job or education, with both routes given real support instead of one being assumed.

PASTE-READY

→ SECTION 9, UNDER "PHASE TWO: MATCHING (MATCHNING)" - AFTER INTERVIEW PREP

- **Re-Skilling & Course Guide (Kompetenslyft)** - builds on Application Check and Match Analysis, turning the honest "stays a gap" outcome into a path to close it.

NO CHANGE TO PHASE ONE

This is a Phase-two, fast-follow addition after the gap analysis exists. Phase one is untouched.

The honest sourcing note

A non-technical note for the responsibility section. It states plainly what data exists as open feeds - and names the one piece that does not.

04

PASTE-READY

→ SECTION 7, HOW WE BUILD IT RESPONSIBLY - NEW BULLET AFTER "HONEST SCOPE", OR A FOOTNOTE TO THE TOOL ENTRY

A check of the Swedish public data sources found that the course catalogue, the skills classifications, and the employment-outcome figures are available as open public feeds, and that course-demand can be read from public labour-market data, with the caveat that the most authoritative demand list is published as a periodic file rather than a live feed. The one piece not yet available as open data is per-programme recognition of prior learning (validering), so it is flagged as a known gap to source properly rather than guessed at.

Open

Course catalogue -
available as open
public feeds

Open

Skills classifications
and employment-
outcome figures

Periodic

Demand data -
authoritative list is a
periodic file, not live

Gap

Validering - not yet
open data; flagged to
source properly

The placement map

Where every fragment goes, and why. No other sections need editing - the two passing mentions of education in the master vision now point at a named area instead of a loose idea.

05

FRAGMENT	DESTINATION	WHY THERE
Tool entry	Section 8, category B - directly after Match Analysis	It is triggered by Match Analysis, so it belongs beside the matching tools, not in the execution set. (Category C works too; B is the stronger fit.)
Promoting paragraph	Executive Summary , or the opening of the Section 8 intro	Use one location only. It reframes education as first-class before the tool detail arrives.
Build-order line	Section 9 , Phase two: Matching, after Interview Prep	Fast-follow after the gap analysis exists. Phase one needs no change.
Honest sourcing note	Section 7 , How We Build It Responsibly	Matches the existing "Honest scope" register. Can also be a footnote to the tool entry.

THE NET EFFECT

The 2030 goal - "matching people to the right job or education" - finally reads the way it is written, with both routes given real support instead of one being assumed.
